Report Generated: 21 July 2026 06:14 PM

Generated By: Agentic AI Banking Fraud Investigation System

Report Version: 1.0

EXECUTIVE SUMMARY

This report presents the findings of an automated fraud investigation conducted by the Agentic AI Banking Fraud Investigation System for Transaction ID **194589**. The investigation analyzed transaction details, customer information, and multiple fraud indicators using specialized AI agents. Based on the overall analysis, the transaction received a fraud score of **65**, which corresponds to a **High** risk level. The system recommends: **Block transaction and investigate immediately..**

The following section provides an overview of the investigated transaction and summarizes the key findings produced by the Agentic AI Banking Fraud Investigation System.

Field	Value	Analysis
Transaction ID	194589	Unique identifier assigned to the investigated transaction.
Customer ID	39351	Unique identifier of the customer involved in the transaction.
Fraud Score	65	Overall fraud score calculated by the Decision Agent using multiple fraud
Risk Level	High	Risk classification determined from the calculated fraud score.
Recommendation	Block transaction and investigate immediately	Recommendation generated after evaluating all investigation finding

TRANSACTION AGENT REPORT

The Transaction Agent analyzed the financial transaction by examining its amount, date, time, type and geographical location. These attributes help determine whether the transaction follows expected banking behaviour or exhibits suspicious characteristics.

Field	Value	Analysis
Transaction Amount	6.0	Amount involved in the investigated transaction. Large transaction amount may increase risk.
Transaction Date	2025-03-23	Date on which the transaction was performed.
Transaction Time	18:27:00	Time of transaction execution. Transactions at unusual hours may increase risk.
Transaction Type	ATM	Type of financial activity performed by the customer.
Transaction Location	Bangkok	Location where the transaction originated. This is compared with the customer's registered location.

CUSTOMER AGENT REPORT

The Customer Agent evaluated the customer's profile, account information and historical behaviour. Previous fraud history and transaction patterns were reviewed to assess the customer's overall fraud risk.

Field	Value	Analysis
Home Location	Faisalabad	Customer's registered home location used to compare transaction origin.
Card Type	Credit	Payment card used to perform the transaction.
Account Balance	8.0	Available account balance at the time of investigation.
Previous Fraud Count	0	Number of previously confirmed fraudulent activities associated with the customer.
Total Transactions	1	Total number of historical transactions analyzed for customer behavior.

FRAUD AGENT REPORT

The Fraud Agent evaluated several fraud indicators commonly associated with suspicious banking activity. Each indicator contributes to the overall fraud assessment and assists in determining the final risk level.

Fraud Indicator	Value	Analysis
International Transaction	Yes	International transactions generally require additional verification because
New Merchant	No	Transactions with merchants that have not been used previously may inc
Unusual Time	Yes	Transactions performed outside the customer's normal activity hours may
Failed Transaction Count	2	Multiple failed transaction attempts before a successful payment can ind
Distance From Home	347.0	Large distances between the customer's registered location and transact

DECISION AGENT REPORT

The Decision Agent reviewed the findings produced by all previous agents and generated the final fraud score, risk classification and recommended course of action.

Decision Factor	Value	Analysis
Fraud Score	65	The fraud score represents the cumulative risk calculated from all detect
Risk Level	High	The overall risk classification assigned after evaluating all transaction, cu
Recommendation	Block transaction and investigate immediately.	The final action recommended by the Decision Agent based on the comp

Executive Summary

This investigation was conducted to review a transaction made by customer ID 39351, with a transaction amount of 6.0 on 2025-03-23 at 18:27:00. The transaction was made at an ATM in Bangkok, which is a significant distance from the customer's home location in Faisalabad. The transaction also indicates an international transaction and was marked as an unusual time.

Decision Justification

The investigation shows that the customer has a credit card with an account balance of 8.0 and has made a total of 1 transaction. However, there are several risk indicators present, including a failed transaction count of 2, a new merchant, an international transaction, an unusual time transaction, and a significant distance from the customer's home location. These indicators require verification and further review to determine the legitimacy of the transaction.

Final Recommendation

Based on the investigation, the final action is to block the transaction and investigate immediately. The risk level is High, and the fraud score is 65. This decision is based on the presence of several risk indicators, including international transactions, unusual time, and failed transactions. The customer's credit card account balance and previous fraud count do not directly impact the decision. The transaction requires further review to determine its legitimacy.

CONCLUSION

The investigation was completed successfully using the Agentic AI Banking Fraud Investigation System. After evaluating transaction characteristics, customer behavior, historical fraud records, and fraud indicators, the transaction was classified as **High** risk with a fraud score of **65**. Based on the comprehensive analysis, the system recommends: **Block transaction and investigate immediately..**
